Ms. Kelly McCarty  
USEPA  
345 Courtland Street, NE  
Atlanta, GA 30365

Dear Ms. McCarty:

In response to your letter dated December 13, 1989, OHM has analyzed the analytical information provided concerning the Saad Site in Nashville, Tennessee. The contaminants present at this site are clearly within the treatment capabilities of the Mobile Thermal Volatilization System (MTVS) operated by O.H. Materials.

The attached information is provided to give you a brief background on the capabilities of OHM's MTVS System and the operating practices we employ.

OHM would be pleased to supply additional information concerning any aspect of the MTVS operations. Please contact me or Greg McCartney if you have any questions or we can be of further assistance.

Sincerely,

Mark J. Rigatti  
Program Manager
